CHECK-IN 2

1) URL of the where you code is hosted:

GitHub:
https://github.com/JoshuaJWeldon/School/tree/master/ICS314

Website:
http://joshuajweldon.com/iCal/index.php

2) The number of lines of code developed to-date, and the programming
language used:

1080 LOC (not including Bootstrap) using java, php, and css [680 LOC increase for
CheckIn 1]

3) A description of number of TDD tests or asserts used.

Since we are coding in php, most of our test have to be done by hand

We tested for dateTime confict errors

Three times of overlapping times

case1: no overlap
case2: half overlap
case3: full overlap

Tested each output on the calendar

Will add asserts() to java portion next iteration

4) A screen shot of a calendar (google, Mac Calendar, Outlook) displaying the input files

5) A screen shot of a calendar (google, Mac Calendar, Outlook, ...) dislpaying the input and the output (free time) files

Any questions or comments about the calendaring project so far.

None as of right now
